Profile

I am a postdoc researcher with a focus in flavour physics and effective theories to understand physics beyond the Standard Model. Now, I want to apply my knowledge to solve problems outside the academic environment.

Experience

Postdoctoral researcher *Instituto de Física Corpuscular (València) & Università de Torino*

October 2024 - Current

My current project is a theoretical analysis of B-meson hadronic decays experimental data.

Postdoctoral researcher *Universitat de Barcelona*

January 2024 – October 2024

I did some analytic calculations of quantum effects in the low-energy effective field theory, for their future implementation in Mathematica.

Predoctoral researcher *Instituto de Física Corpuscular (València)*

November 2020 – December 2023

I continued the project started at Universidad de Salamanca. I also taught quantum physics as an assistant professor in the physics' bachelor of Universitat de València, served as a mentor in the #MagnIFIca program and was part of the Diversity and Equality Commission.

Researcher *Universidad de Salamanca*

January 2020 – March 2020

I was responsible for defining new possible experimental observables and generating numerical simulations of them in the context of B-meson semileptonic decays using Fortran.

Education

PhD in Physics *Universitat de València*

October 2019 – December 2023

Master's degree in advanced physics *Universitat de València*

October 2018 – July 2019

Bachelor's degree in physics *Universidad de Murcia*

September 2014 – July 2018

Skills

Data analysis | Problem-solving | Presentation skills | Scientific writing | Mentoring | Project management

Software

Microsoft Office | LaTeX | Canva

Programming

Python (NumPy, Pandas) | Mathematica | Fortran | HTML (basic level)

Languages

Catalan (native) | Spanish (native) | English (B2 level)
